                                                                                                                                                                                                         CC prevention of various types of disorders in e.g. humans, mice, rabbits, CC goats, horses, cats, dogs, chickens or sheep. A pathological condition CC can be determined by detecting the presence or absence of a mutation in a CC cardiovascular system antigen polynucleotide. The treatable disorders CC include autoimmune diseases such as rheumatoid arthritis, CC hyperproliferative disorders such as rheumatoid arthritis. CC cardiovascular disorders such as cardiac arrest, cerebrovascular CC disorders such as cardiac arrest, cerebrovascular CC disorders such as cerebral ischaemia, nervous system disorders such as a Zardiac arrest, viruses and fungi, CC cardiac disorders such as corneal infection, endocrine disorders such as CC crohn's disease, infections caused by bacteria, viruses and fungi, CC crohn's disease, renal disorders such as glomerulonephritis and cCC crohn's disease, renal disorders such as glomerulonephritis and CC crohn's disease, renal disorders such as glomerulonephritis and cCC crohn's disease, renal disorders such as glomerulonephritis and cCC crohn's disorders such as asthma and pleurisy. The polypeptides can can be used to aid wound healing, to prevent skin aging due to sunburn, CC to maintain organs before transplantation, to regenerate tissues and in

(I) have cytostatic cc amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cc artivity, and can be used in gene therapy and vaccine production. (I) cc artivity, and can be used in gene therapy and vaccine production. (I) cc proteins and polynucleotides may be used in the prevention, diagnosis and cc example, they may be used to treat disorders associated with inappropriate (I) expression. For cc expression by rectifying mutations or deletions in a patient's genome cc expression by rectifying mutations or deletions in a patient's genome cc that affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) cc supplement the patients own production of (I). Additionally, (I) protein. (I) proteins and polynucleotides may be used to prevent, the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cancers and cancer metastases of haematopoietic related diseases, especially concers and cancer metastases of haematopoietic antigen genomic concers and cancer metastases of haematopoietic antigen genomic represent human immune/haematopoietic antigen genomic represent sequences used in the exemplification of the present invention. CC presence of absence of P. acnes in a patient comprises contacting the correct with a binding agent that binds to the proteins and conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelltis), uvestis and endophthalmitis. Cc pustulosis, hypertosis and osteomyelltis) uvestis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central P. acnes is also involved in infections of bone, joints and the central Cc presence or absence of p. acnes in a patient comprises contacting the Cc presence or absence of p. acnes in a patient comprises contacting a cc presence or absence of p. acnes in a patient comprises contacting a cc presence or absence of p. acnes in that binds to the proteins of the invention cc and determining the amount of bound protein in the sample. The CC and determining the amount of bound protein in the sample of the compression and activity of P. acnes plypeptides and compression and activity of P. acnes plypeptides and cc downregulate expression and activity of P. acnes plypeptides and cc diagnostic agents for determining P. acnes presence, for example, by cc diagnostic agents for determining P. acnes presence, for example, by cc enzyme linked immunosorbent assay (ELISA).

CC Note: The sequence data for this patent did not form part of the printed cc at ftp.wipo.int/pub/published_pct_sequences.

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosts of medical conditions caused by Particularian and endephasis of medical conditions caused by Particularian and Endemyelitis), uveitis and endephthalmitis. Acne, CC pustilosis, hypertosis and osteomyelitis), uveitis and endephthalmitis. CC enervous system, however it is particularly involved in the inflammatory presence or absence of P. acnes in a patient comprises contacting the gresence or absence of P. acnes in a patient comprises contacting a and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies CC specific for P. acnes proteins. These antibodies can be used to therefore treat P. acnes infections. The antibodies can be used to CC clasgostic agents for determining P. acnes presence, for example, by CC enzyme linked immunosorbent assay (BIISA).

CC specification, but was obtained in electronic format directly from WIPO XXX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27-FEB-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAU59903;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAU59903 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, haematopoissis regulating activity, tissue growth factor activity, haematopoissis regulating activity, tissue growth factor activity, immunomodulatory activity and treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 20; SEQ ID NO

CC polypeptides. The proteins and their associated DNA sequences are used in CC polypeptides. The proteins and diagnosis of medical conditions caused by the treatment, prevention and diagnosis of medical conditions caused by CC p. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomylitis), weitis and endophthalmitis. CC pustulosis, hypertosis and osteomylitis), weitis and endophthalmitis. CC pustulosis, however it is particularly involved in the inflammatory CC nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the CC gresence or absence of p. acnes in a patient comprises contacting a CC presence or absence of p. acnes in a patient comprises contacting a CC gand determining the amount of bound protein in the sample. The CC and determining the amount of bound protein in the sample. The CC specific for P. acnes proteins. These antibodies can be used to convergulate expression and activity of P. acnes polypeptides and downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as therefore treat P. acnes infections. The antibodies may also be used as therefore treat P. acnes for determining P. acnes presence, for example, by diagnostic agents for determining P. acnes presence, for example, by diagnostic agents for data for this patent did not form part of the printed CC Note: The sequence data for this patent did not format directly from WIPO cat first the printed printed in electronic format directly from WIPO cat format directly from WIPO at first the printed printed as for this patent did not format directly from WIPO cat first active the printed at first active

APPLICATION NUMBER: 07/736,335
FILING DATE: JULY 25, 1991
ATTORNEY/AGENT INFORMATION:
NAME: Ian C. MCLECC
REGISTRATION NUMBER: 20,931
REFERENCE/DOCKET NUMBER: MSU 4.1-132
TELEPHONE: (517) 347-4100
TELEPAX: (517) 347-4103
INFORMATION FOR SEQ ID NO: 21:
SEQUENCE CHARACTERISTICS:
LENGTH: 99 amino acids
TYPE: amino acids
STRANDEDNESS: single
TOPOLOGY: linear
MOTEOTICE TYPE: 11near

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                          Score

cc NgR3, comprising a 50 amino acid LRRCT sequence, a 284 amino acid with received consequence, or a 420, 461 or 392 amino acid sequence, all given in the specification. The NgR3 protein or as binding antibody is useful for cedecreasing inhibition of axonal growth of a central nervous system (CNS) neuron, by contacting the neuron NgR3 or its antibody, and for treating CC NS disease, disorder or injury. NgR3 or its antibody, and for treating cerebral injury, spinal cord injury, stroke, demyelination, encephalitis, multiple sclerosis, monophasic demyelination, encephaloguelitis, multiple sclerosis, monophasic cord englination, encephaloguelitis, multiple sclerosis, monophasic demyelination, encephaloguelitis, multiple sclerosis, monophasic cord assay, and as a research tool for inducing an immune response in a cord accord accordinate NgR3 is useful for inducing an immune response in a cord accordinate NgR3, as a bait protein in a two-hybrid or three-hybrid cord assay, and as a research tool for identification, characterisation and cord sequences of the invention are useful for screening for RFLP associated with certain disorders, for genetic mapping, and for gene therapy. The vector containing NgR3 is useful for producing non-human transgenic cord and therapeutic purposes. The sequences of the invention and cord and therapeutic purposes. The sequences of the invention, vectors and cord and therapeutic purposes. The sequences of the invention, vectors and cord and NgR2 protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  121
The invention relates to a Nogo receptor homologue polypeptide, NgR2 or NgR3, comprising a 50 amino acid LRRCT sequence, a 284 amino acid NTLRRCT sequence, or a 420, 461 or 392 amino acid sequence, all given in the specification. The NgR3 protein or its binding antibody is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             06-OCT-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-OCT-2001; 2001WO-US31488

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GC decreasing inhibition of axonal growth of a central nervous system (CNS) CC neuron, by contacting the neuron NgR3 or its antibody, and for treating CC CNS disease, disorder or injury, NgR3 or a vector comprising NgR3 is CC demyelinating diseases, e.g. multiple sclerosis, monophasic demyelinating, encephalomyelitis, multiple sclerosis, monophasic CC panencephalitis, Marchiafava-Bignami disease, Spongy degeneration, CC panencephalitis, Marchiafava-Bignami disease, Spongy degeneration, CC Reabbe's disease, Canavan's disease, metachromatic leukodystrophy and CC mammal against NgR3, as a bait protein in a two-hybrid or three-hybrid CC purlication of interacting, regulatory proteins. The nucleotide cequences of the invention are useful for screening for RFLP associated CC vector containing NgR3 is useful for producing non-human transgenic cand therapeutic purposes. The sequences of the invention and/or quantitation of NgR3, and for diagnostic CC and therapeutic purposes. The sequences of the invention, vectors and growth such as cancer and tumour growth. This sequence represents the mature human NgR2 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC a food supplement. (II) and its sunding partners are useful in medical conditions of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful in medical conditions of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and CC consisted end polymorphic conditions are useful for the sequences and polymorphic conditions of the invention.

CC Note: The sequences are sequences of the invention.

CC antino acid sequences are discorders or other traits to assess biodiversity amino acid sequences of the invention.

CC specification, but was obtained in electronic format directly from MIPO

Novel Nogo receptor homolog polypeptide, NgR2 or NgR3, useful for treating central nervous system disorder, cerebral injury, spinal injury, stroke, and demyelinating diseases
                                                                                                                                                      cord
```

cc quantitation, encephalitis, marchiarly mutitives, spongy degeneration.

Cc plexander's disease, Canavan's disease, metachromatic leukodystrophy and cc Alexander's disease, Canavan's disease, metachromatic leukodystrophy and cc krabbe's disease. NgR3 is useful for inducing an immune response in a cc mammal against NgR3, as a bait protein in a two-hybrid or three-hybrid cc says, and as a research tool for identification, characterisation and cc gequences of the invention are useful for screening for RFLP associated cc with certain disorders, for genetic mapping, and for gene therapy. The cc with certain disorders, for genetic mapping, and for gene therapy. The cc animals. The NgR3 binding antibody is useful for isolating and purifying canimals. The NgR3 binding antibody is useful for isolating and purifying cand therapeutic purposes. The sequences of the invention, vectors and cc antibodies are useful for treating or preventing unregulated cellular cc growth such as cancer and tumour growth. This sequence represents the cc mouse NgR3 protein of the invention. The invention relates to a Nogo receptor homologue polypeptide, NgR2 or NgR3, comprising a 50 amino acid LRRCT sequence, a 284 amino acid NTLRRCT sequence, or a 420, 461 or 392 amino acid sequence, all given in the specification. The NgR3 protein or its binding antibody is useful for specification in the NgR3 protein or its binding antibody is useful for decreasing inhibition of axonal growth of a central nervous system (CNS) neuron, by contacting the neuron NgR3 or its antibody, and for treating CRS disease, disorder or injury. NgR3 or a vector comprising NgR3 is CNS disease, disorder or injury, spinal cord injury, stroke, useful for treating cerebral injury, spinal cord injury, stroke, demyelinating diseases, e.g. multiple sclerosis, monophasic demyelination, encephalomyelitis, multifocal leukoencephalopathy, warning diseases and constraints and constraints are several constraints. NTLRECT

```
CC The invention relates to a Nogo receptor homologue polypeptide, NgR2 or CC NgR3, comprising a 50 amino acid LRRCT sequence, a 284 amino acid NTLRRCT CC sequence, or a 420, 461 or 392 amino acid sequence, all given in the CC specification. The NgR3 protein or its binding antibody is useful for CC decreasing inhibition of axonal growth of a central nervous system (CNS) (CC cns disease, disorder or injury, NgR3 or a vector comprising NgR3 is demyelinating disease, e.g. multiple solerosis, monophasic demyelinating, encephalomyelitis, multifocal leukoencephalopathy, CC panencephalitis, Marchiafava-Bignami disease, Spongy degeneration, CC Alexander's disease, Canavan's disease, metachromatic leukodystrophy and CC assay, and as a research tool for inducing an immune response in a CC assay, and as a research tool for identification, characterisation and CC sequences of the invention are useful for screening for RFLP associated vector containing NgR3 is useful for producing non-human transgenic CC NgR3, for localisation and/or quantitation of non-human transgenic cand thorapeutic purposes. The sequences of the NgR3 and for diagnostic and thorapeutic purposes. The sequences of the invention are useful for isolating and purifying and thorapeutic purposes. The sequences of the invention, vectors and condition are useful for isolating and purifying antibodies are useful for treating or preventing unregulated cellular cc mature mouse NgR3 protein of the invention. This sequence represents the mature mouse NgR3 protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation
                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                             N-PSDB; AAS79358

The polymerleotides are also used in diagnostics as expressed sequence tags cc for identifying expressed genes. (I) is useful in gene therapy techniques cc (II). (II) is useful for generating antibodies against it, detecting or cc quantitating a polypeptide in tissue, as molecular weight markers and as cc quantitating a polypeptide in tissue, as molecular weight markers and as cc quantitating a polypeptide in tissue, as molecular weight in medical cc imaging of sites expressing (II). (I) and (II) are useful in medical cc disorders involving aberrant protein expression or biological activity. The polypeptide and polypunclectide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess blodiversity cand to produce other types of data and products dependent on DNA and cd diagnostic amino acid sequences of the invention.

The invention relates to a Nogo receptor homologue polypeptide, NgR2 or NgR3, comprising a 50 amino acid LRRCT sequence, a 284 amino acid NTLRRCT sequence, a 284 amino acid NTLRRCT sequence, or a 420, 461 or 392 amino acid sequence, all given in the sequence, or a 420, 461 or 392 amino acid sequence, all given in the specification. The NgR3 protein or its binding antibody is useful for decreasing inhibition of axonal growth of a central nervous system (CNS) neuron, by contacting the neuron NgR3 or its antibody, and for treating CNS disease, disorder or injury, NgR3 or a vector comprising NgR3 is useful for treating cerebral injury, spinal cord injury, stroke, demyelinating disease, e.g. multiple sclerosis, monophasic demyelination, encephalomyelitis, multifocal leukoencephalopathy, panencephalitis, Marchiafava-Bignami disease, Spongy degeneration, allexander's disease, Canavan's disease, metachromatic leukodystrophy and Krashe's disease, Canavan's disease, metachromatic leukodystrophy and Krashe's disease, Canavan's disease, metachromatic leukodystrophy and Krashe's disease, Incavally for information and immune reasonate in a
                                                                                   mammal against NgR3, as a bait protein in a two-hybrid or three-hybrid assay, and as a research tool for identification, characterisation and purification of interacting, regulatory proteins. The nucleotide sequences of the invention are useful for screening for RFLP associated with certain disorders, for genetic mapping, and for gene therapy. The vector containing NgR3 is useful for producing non-human transgenic animals. The NgR3 binding antibody is useful for isolating and purifying NgR3, for localisation and/or quantitation of NgR3, and for diagnostic and therapeutic purposes. The sequences of the invention, vectors and antibodies are useful for treating or preventing unregulated cellular growth such as cancer and tumour growth. This sequence represents the partial human NgR3 protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2002-416677/44.

                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes sixty four human PRO proteins which can CC be used in the treatment of immune related diseases. The human PRO CC proteins, anti-PRO antibodies, agonists and antagonists are useful for CC treating and diagnosing immune related disorders. The disorders are CC estected from systemic lupus crythematosus, rheumatoid arthritis, selected from systemic lupus crythematosus, rheumatoid arthritis, constraints, juvenile chronic arthritis, spondyloarthropathies, constraints, systemic vasculitis, sarcoidosis, autoimmune haemolytic canaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, can peripheral nervous systems, hepatobiliary diseases of the central composed disease, gluten-sensitive enteropathy and whipple's disease, controlmune or immune-mediated skin diseases, allergic diseases, inflammatory constitution and controlmune or immune-mediated skin diseases, allergic diseases, controlmunological diseases of the lung, and transplantation associated controlmunological diseases and transplantation associated controlmunological diseases and transplantation probes used controlmunological diseases are described and hybridisation probes used controlmunological diseases are described and protein the present invention.

                                                                                                                                                                                                                           New secreted and transmembrane polypeptides and their polynucleotides, useful for treating blood coagulation disorders, cancers and cellular adhesion disorders –  \frac{1}{2} \left( \frac{1}{2} \right) \left( \frac{1}{2} 
                                 The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation
                                                                                                                                                              Claim 12; Fig 161; 530pp; English.

They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AA233891 to AA234338, and AA241685 to AA241774 represent polynucleotide and polypeptide sequence given in the exemplification of the present

The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bloactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28-APR-1999

The present invention describes nucleic acids encoding PRO polypeptide useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or anglogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24388 to AAB24435 represent nucleotide and protein sequences used in the exemplification of the present invention.

                                                                                                                                         The present sequence is that of human antitumour protein PRO526, as deduced from a foetal liver cDNA clone (see AAA49724). PRO526 has a mol.wt. of 50,708 and a pr of 9.28. It has homology to the leucine rich repeat protein superfamily. A claimed method for inhibiting the growth of a tumour cell comprises exposing the tumor cell pRO159, PRO2707, PRO3210, PRO2719, PRO2214, PRO324, PRO328, PRO301, PRO526, PRO362, PRO356, PRO599 or PRO866 (see AAY56337-49), their agonists or chimeric polypeptides incorporating them. The tumour is especially a cancer selected from breast, ovarian, renal, colorectal, uterine, prostate, lung, bladder and central nervous system cancer, melanoma and leukaemia. Methods for the recombinant expression of the antitumour proteins are also provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        22-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAUI2172-AAUI2446 represent novel human secretory and transmembrane CC PRO polypeptides. The PRO polypeptides are useful to detect other CC PRO polypeptides, to link bioactive molecules to cells expressing CC PRO polypeptides, to modulate biological activities of cells expressing CC PRO polypeptides, and to detect the presence of mammalian lung, colon, CC breast, prostate, rectal, cervical or liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. CC come of the 275 sequences are also useful to stimulate the release of CC tumour necrosis factor-alpha (TNF-alpha) from human blood, the CC tumour necrosis factor-alpha (TNF-alpha) from human blood, the CC gene expression in pericyte cells, the release of proteoglycans from CC cartilage, the proliferation of inner ear utricular supporting cells or CC cartilage, the proliferation of inner ear utricular supporting cells or CC cartilage, the proliferation of endothelial cells. Some of CC the PRO polypeptides may modulate glucose or free fatty acid uptake by the propertides cells or by adipocytes; or inhibit binding of A-peptide complex cells in binding interactions. The polynucleotides encoding CC molecules involved in binding interactions. The polynucleotides encoding CC transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                           QY
                                                                                                                                                                                                                                                                                                                                                  В

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26-SEP-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAU04589
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAU04589 standard;
                                                                                                                                                                               The sequence represents the human Nogo receptor, a protein expressed in axons and dendrites of neurons in the central nervous system during axonal growth. The invention relates to the use of the mogo receptor, nogo protein, their nucleic acids, vectors expressing them and artibodies against them, to isolate agents which block nogo receptor antibodies against them, to isolate agents which block nogo receptor mediated axonal growth. The agent is useful for treating a central nervous system disorder which is a result of cranial or cerebral trauma, spinal cord injury, stroke or a demyelinating disease selected from multiple sclerosis, monophasis demyelination, encephalomyelitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         432
